Re: Compliance with 21 U.S.C. 360ii(a)

Dear Samuel Ballingrud,

The Soft Lights Foundation has sent letters to the following federal agencies, requesting compliance with 21 U.S.C. 360ii(a) for Light Emitting Diode products:

- Food and Drug Administration
- Environmental Protection Agency
- Department of Labor
- National Highway Traffic Safety Administration
- Federal Highway Administration
- Federal Railroad Administration
- Consumer Product Safety Administration
- Department of Energy
- Access Board
- Federal Motor Carrier Safety Administration
- Federal Aviation Administration

As noted in the letters to each federal agency, 21 U.S.C. 360ii(a) requires that the FDA minimize emissions of, and exposure of people to, unnecessary electromagnetic radiation to protect public health and safety. Most artificial electromagnetic radiation is unnecessary. 21 U.S.C. 360ii(a)(6) requires the FDA to consult and liaise with other federal agencies in the development of performance standards. Jeffrey Shuren, Director of the FDA Center for Devices and Radiological Health, along with leadership from all other federal agencies, has failed to comply with statute 21 U.S.C. 360ii(a). Because this failure to comply among all agencies is willful, and not a mere oversight, the failure to comply may be considered an illegal conspiracy to protect corporations and businesses at the expense of public health and safety.

I request that you act in the best interests of both your client and the public and facilitate the restoration of the FDA TEPRSSC advisory committee, the establishment of permanent liaisons between each federal agency and the FDA, and the initiation of programs to protect the public health and safety

from hazardous LED Visible Light radiation emitted by products such as LED vehicle headlights, LED streetlights, LED General Service Lamps, LED flashing lights, LED indicator lights, LED lights in consumer products, and thousands of other LED products.

Sincerely,

/s/ Mark Baker

President

Soft Lights Foundation
