"these lights are dangerous and make night driving(past 4pm in the winter here) dangerous for even people with mild stigmatism" "I started driving in 2022, three years ago. I have no eye issues medically. Since 2023 after my first year driving I can no longer drive at night due to not being able to see the road after LED light exposure from oncoming vehicles and the vehicles driving behind me. My eyes are filled with spots and color dots for about 30 seconds after LED beams hit my eyes. I am not old, I'm 21 and cannot see while driving!" 2/27/2025 "Sa hret="https://chng.it/t46S4fBVXG" rel="nofollow">https://chng.it/t46S4fBVXG" "The combination of increasingly bright headlights, wholeces getting taller, and the adoption of a "cold" hue of light is literally lethal, and is directly costing Americans their lives. Laws need to be put in place to mandate the brightness, angle, and hue of headlights to prevent drivers from being blinded. There have been many occasions where I haven't been able to see a pedestrian crossing the street until the last few seconds due to a truck or SUV with unnecessarily bright headlights in the oncoming lane, and this story is becoming more common as the years go on. It's also been proven that "cold" or "hard" lights (like the ones you see in modern cars) are far more blinding than "soft" or "warm" lights (like you see in older cars), even at the same level of lumens, which is adding to the problem. The only way to solve this problem will be to put a limit on how bright headlights can be, mandate using a warmer hue for the color of the light, and ensure that these lights are pointed at the right angle. And as much as I'm sure a lot of people don't want to hear this, the only way to enforce these laws is with yearly inspections in EVERY state. As a car enthusiast, I typically hate having the government tell me what I can and can't do with my car, but the reality is that the safety of our fellow humans needs to take precedent." "As someone who drives a "normal" car, driving in Ame		"those lights are dangerous and make night driving/neet 4nm in the winter here) dangerous

	2/22/2025	so I can drive safely"

2/22/2025	"I am an Uber Driver, and I mainly drive at night, quite often from dusk until dawn. I enjoy this schedule, and moreover this job, above all other schedules and jobs I've worked in the past. However, the only issue I have with driving at night are the blinding headlights that greet me maliciously on the roadways- and worse, negligent drivers who have their even brighter highbeams on. I have nearly wrecked numerous times, however other drivers may not be so lucky and fortunate. The soft, yellowish lights from the late 1990s and early 2000s were perfect- one could see perfectly on the road with them, without needing to flip one's own highbeams on, and could see whenever someone else's yellow headlights came across them. We need soft light back, and we need it now."
	"Oncoming cars with these lights look like they have their high beams on. When I see one
2/22/2025	coming I try to mark where the road is in front of me so I can continue driving when I am finally blinded when these cars get closer. Need regulation on this, it is such a pointless hazard."
2/21/2025	"LED headlights are blinding"
2/18/2025	"Many others and myself have feared for our safety when blinded by bright head lights. there's not always reflectors to help and only newer cars have night mode for their rear view mirror, these were what I was told I should do when I get blinded and obviously they don't always work. not only do the head lights blind you while they are driving towards you but also after when your vision has to adjust to such an extreme change in brightness, which may leave blind spots for minutes."
	"I no longer feel safe driving at night because I'm constantly being blinded by these
2/16/2025	headlights. They make the road way more dangerous for everyone."
	"More than once, I have had to shut my eyes in the presence of those infernal things, an
2/15/2025	event fraught with danger."
	"These bright headlights should be banned because it's EXTREMELY dangerous. I have
	binocular vision dysfunction, bright lights hurt my eyes and make my vision distorted. I
	have to slow down and let them pass me, so that I feel safe enough to drive. It's terrifying
2/13/2025	driving at night on freeways with those lights."
0/40/0005	"I try not to drive at night because of the brightness of the head lights. I have friends who
2/13/2025	will not drive in the dark at all."
	"I have astigmatism and significant photosensitivity. I have had to bring my life to almost a complete standstill because of how difficult and dangerous LED headlights have made the road. I live in a rural area and get flash banged around every corner and over every hill, day and night. I have had people around here maliciously turn their lights on at me both while driving and as a pedestrian because they think it's funny (I've seen them laughing as a pedestrian). I have a headache after every drive and my visual snow syndrome gets worse the more I'm exposed. The cops do nothing and are now ADDING aftermarket ultra bright
2/13/2025	LEDs to their vehicles. I just want to exist safely and comfortably."
	"In the state I live in it's legal to flash your brights at drivers who have them on. More often than not the driver will then engage their brights which are not too much brighter than their normal headlights. My vision is regularly negatively impacted by headlights that are too bright. I understand there's a mode on newer cars that allows them to drive with brights on. The sensor in their car is supposed to switch to normal lights when a certain amount of light is detected. Apparently my own headlights are not enough to engage this feature so I'm stuck in a bad situation. Regular headlights need to be dimmer. If someones headlights
2/12/2025	are bright enough to compare other drivers then the headlights are just too bright."
	,

"These lights make it dangerous and obnoxious to drive at night and early morning; they pull your attention away from where it should be - on the road" "i'm sick of jerks on the road putting me and other drivers around me in dangerous driving conditions all because they want to have a slightly clearer view of the road" "LED headlights have gotten so bad that I have to almost come to a complete stops because I simply cannot see a single thing in front of me. It's already bad enough driving at night having astigmatism, but having headlights so bright it strains your eyes, glares on you windshield so you can't see out of it, gives you headaches, etc. No low bean headlights should be blinding people." "No one should have to crouch in the driver's seat so that they avoid the glare of the headlights behind them, which I find myself doing all the time while driving at night. Also makes it quite difficult to look both ways while at a stop sign without getting visually distracted. It's bad enough there are so many overly bright LED flood lights on people's homes and other buildings, but these new headlights are especially a concern."

distracted. It's bad enough there are so many overly bright LED flood lights on people's homes and other buildings, but these new headlights are especially a concern."
2/11/2025 homes and other buildings, but these new headlights are especially a concern."
"I can't see at night! These new headlights are ridiculously bright. You can't even see the
car behind you because their lights are so bright blinding you! There needs to be regulation
2/10/2025 on how bright headlights can be!"
"These newer LED lights are absolutely horrible, not only for my astigmatism, but in general
the blinding effect of these lights AFTER they have passed you or moved over last so long. I
have to drive rural backroads all of the time when going home from college, and I have to
slow down almost to the point where I have to completely stop so I can try to focus and see
the road, otherwise I would for sure run off the side. This is not only a concern of being able
to see, but it is extremely dangerous to slow down on a very dark road at night when there
are other cats behind you. The same way you get pulled over for going too fast over the
speed limit, you get pulled over for going too slow because that's dangerous as well. Having
to go from 55+ mph on a two lane road to around 30 mph very suddenly is not safe at all.
These LED lights consume my entire windshield and leave me partially blinded afterwards.
Not only are these lights dangerous on rural roads, they're just a dangerous on city roads.
Driving behind someone with your brights on is illegal so why aren't these LED headlights
2/10/2025 regulated? I digress 😌 "
"I have astigmatism & Diterally CANNOT see with these new lights. We need
2/10/2025 regulations on these lights ASAP!!"
"It ain't just the brightness it's the fact that the whiter or blue-er the light the less you can
see in the shadow areas of your view AND the more blinding the light is compared to yellow
2/10/2025 light."
"A vehicle was stopped on the wrong side of the road, facing me with bright headlights, on a
rainy night. The dark and damp conditions made it hard to see, but their bright lights were
so blinding, I couldnt see that there was a pedestrian on the road in the path I would've
2/10/2025 taken to get around the stopped vehicle. It was an all around dangerous situation"
"With lumen maximums set, enforcement is incredibly necessary. Law enforcement
should be equipped with lumen meters, as damage to the citizens' eyesight and ability to
be safe on the road will result in nothing positive towards the politicians' workforce and
2/9/2025 supporters."
2/9/2025 "The lights are too damn bright!"
2/9/2025 "LED lights blinds Lives"

	"Even led lighting started to impact sport matches. https://www.msn.com/en-
	in/sports/cricket/it-has-more-glare-and-sometimes-former-pakistan-captain-blames-pcb-
2/9/2025	over-led-light-issue-after-rachin-ravindra-gets-injured/ar-AA1yG7oL"
2/9/2025	"Headlights are so bright now I'm wearing sunglasses at night!"
	"Making headlights brighter to supposedly increase safety for the driver of a given car
	translates into decreased safety for every other driver on the road. Ironically, that same
	"safer" driver is less safe overall because they are equally exposed to their fellow "safer"
2/9/2025	drivers whose cars have overly bright lights!"
2/9/2025	"I cant even drive when the sun goes down"
	"LED lights have been used without any thought to the effects they have. They are now
	everywhere since they're so cheap. Driving at night not only subjects you to extremely
	bright lights from cars but also from lots & Dillots of buildings. We need light trespass
2/8/2025	laws. Driving (and walking) at night has become very stressful. It is a health hazard."
	"I genuinely cannot see the road sometimes and I have an astigmatism in my eyes, which
2/8/2025	makes it ten times harder to see with these new lights, the old lights never had any issues"
2/8/2025	"New headlights are too bright and dangerous for other drivers"
	"I try not to drive at night at all due to the harsh and blinding lights I encounter with
2/9/2025	oncoming traffic and even worse, drivers behind me with their bright lights. It's the newer, too bright LED's that are the problem."
2/8/2025	"The blinding headlights are so dangerous. The brightness is so bad it makes it hard to
2/8/2025	drive on the road and to see any pedestrians."
2/0/2020	"I almost died tonight on a snowy road, with a big pickup blinding me from behind. I
2/8/2025	couldn't see a thing! This happens far too often."
2.0.2020	"These blinding headlights at night are completely unsafe. These agencies have to do
	something immediately! I can not see to drive when the cars coming at me have blinding
	headlights! After these cars and trucks pass me I feel like my eyes are burning and I can't
	see anything. And that's just one car or truck I have to pass hundreds at night to drive
	somewhere. Do something about it!! How can this be legal for other vehicles to completely
	blind me with ultra bright led headlights?? Most time I can't even see the road and feel like
2/8/2025	this will cause a head on collision because I can blinded by the headlights! Fix this now!"
	"I used to have LED headlights on my car, but at some point I realized how blindingly bright
	they are, and had them removed. (I didn't want my headlights to be the cause of an
	accident.) Unfortunately, my regular headlights are so dull in comparison to all the other
2/8/2025	cars around me that I'm at a disadvantage. It seems there's no way to balance others' safety with my own when it comes to headlights."
2/8/2025	"Road safety"
2/0/2023	"These are worse than the 'brights' of old that people were required by law to switch off
	when other drivers approached. When these new LED's come at me, I flash my brights at
2/8/2025	them or just click them on until the car passes to let them know how I feel."
5. 2525	"I avoid driving at night if I can. Whenever possible I drive a path divided by a median. I've
	had to come to a near dead stop many times as I could not see due to the headlights of an
2/8/2025	oncoming car."

	"I'm in my fifties and finally ended up quitting my job as a driver because due to
2/7/2025	astigmatism the right white or LED headlights make it so that I'm completely blind at times

actually pull over until they pass. When they're coming at me I have to slow way down I could be on the freeway or on the highway and it's just so bright that not only am I not seeing correctly but literally blind for a moment. And if I'm on a long drive I'll get a migraine headache out of this world. I believe they to be a safety hazard a heatth hazard and are causing a lot of traffic fatalities today." "I bought a new Ford Maverick and discovered it had those bright headlights I have been complaining about for years. I asked dealer if they could swap out and they said it would cost me a fortune! How dumb!" "While both sedans and pickup trucks/SUVs have blinding headlights, pickup trucks/SUVs headlights are also higher, so that they shine directly into the windshields of sedans and other lower vehicles (not to mention the eyes of pedestrians). The number of larger and higher vehicles on the road means that they are bigger to the problem of blinded drivers on the road. It would be helpful if manufacturers of these larger vehicles began designing headlights on these vehicles to be at the same height as those on sedans and smaller vehicles." "Headlights are getting out of control, especially on trucks that are the eye line of those driving in smaller vehicles." "Not only are the headlights annoying and blinding, recently I have noticed these LARGE pickup truck owners illuminating the underside of their trucks. WHO THE TRUCK approved that? That is 1000% worse!" "Yes it's convenient for the people driving the cars, but this is really becoming a danger especially on mountain passes like here in Colorado." "Blinding headlights are a growing safety hazard, and I have experienced several issues because of them. One of the most dangerous problems I face is when a vehicle with overly bright headlights comes up behind me at night. The intense glare creates a sharp shadow in front of my car, making the road appear much darker, as if my headlights are off. At times, the effect is so extreme that I cannot see my own he		when driving in at night. To the point where especially if they came up helpind me I have to

At times, the effect is so extreme that I cannot see my own headlights illuminating the ground, making it difficult to see obstacles, road markings, or anything ahead of me. The glare in my mirror to help dim the brightness. And this is only one of the many challenges I have encountered, from temporarily being blinded by oncoming traffic to dealing with reduced visibility in critical situations. It is an issue that needs to be addressed to keep the roads safer for everyone." "I'm tired of being blinded while driving at night! This is too dangerous and something needs to be done about it." "As someone who's been personally victimized by these bright led headlights, they gotta go. I understand needing to be able to see cars at night or in low visibility but not at the risk of running other drivers off the road due to these blinding lights." "I'm blinded by them!" "As someone who's been personally victimized by these bright led headlights, they gotta go. I understand needing to be able to see cars at night or in low visibility but not at the risk of running other drivers off the road due to these blinding lights." "I'can't stand driving		the road. It would be helpful if manufacturers of these larger vehicles began designing
"blinding headlights are dangerous" "Headlights are getting out of control, especially on trucks that are the eye line of those driving in smaller vehicles." "Not only are the headlights annoying and blinding, recently I have noticed these LARGE pickup truck owners illuminating the underside of their trucks. WHO THE TRUCK approved that? That is 1000% worse!" "Yes it's convenient for the people driving the cars, but this is really becoming a danger especially on mountain passes like here in Colorado." "Blinding headlights are a growing safety hazard, and I have experienced several issues because of them. One of the most dangerous problems I face is when a vehicle with overly bright headlights comes up behind me at night. The intense glare creates a sharp shadow in front of my car, making the road appear much darker, as if my headlights are off. At times, the effect is so extreme that I cannot see my own headlights illuminating the ground, making it difficult to see obstacles, road markings, or anything ahead of me. The glare in my mirrors is also unbearable, to the point where I have permanently adjusted my rearview mirror to help dim the brightness. And this is only one of the many challenges I have encountered, from temporarily being blinded by oncoming traffic to dealing with reduced visibility in critical situations. It is an issue that needs to be addressed to keep the roads safer for everyone." "I'm tired of being blinded while driving at night! 	"These LED headlamps are blinding even in early morning light and dusk lighting
2/5/2025	conditions"
2/5/2025	"This is a dangerous hazard."
27072020	"I have very light-sensitive eyes (photophobia) due to light eye color, astigmatism, and chronic migraines. Night driving is already a more dangerous circumstance due to more limited visibility, and has become increasingly stressful with the introduction of LED lights, which are hazardously bright. Even when I use my rear view mirror's night mode, this is problematic because (a) this feature is not available for my side-view mirrors and (b) this doesn't protect me from the headlights of cars driving toward me on the other side of the road, and (c) I still also get a painful, blinding bolt of light in the eye whenever I look back to check my blind spot. I know that I am not alone in this concern, and I hope you will make
	changes to improve this very fixable public health concern by banning LED lights in
2/4/2025	headlights."
2/4/2025	"These lights are blinding and make it impossible to see"
2/3/2025	"They are blinding to other drivers!"
2/3/2025	"these LED lights pose a significant hazard to oncoming drivers."
	"Bright headlights are plain dangerous! There was a reason why we kept them soft initially. Nowadays, there is very little difference between headlights and bright lights and it is becoming increasingly cumbersome. I feel less safe, especially when it rains as the reflection on the wet roads increases the blinding effects. I often find myself lifting my hand up to block headlights from coming directly into my eyes and I know this cannot be safer than keeping both of my hands on the wheel. Regulation and implementation is a must to
2/3/2025	save lives or simply to improve the quality of a night drive."
2/3/2025	"I'm signing because high beams and overly bright headlights can be hazardous and we need government support to enforce car manufacturers to solve the problem they created."
2/2/2025	"These LED headlights are literally blinding at night on narrow single lane roads. Dangerous and ridiculous."
2/3/2025	"These headlights are dangerous!!"
2/2/2025	"The headlights in the past weren't as blinding as they are now. With how blinding bright
2/2/2025	they are now I'm nervous to drive at night. There are times I feel like I could get into an accident, and when it's raining or snowing my vision is blurred and I can barely see the lines on the road. I hope this can be changed, for the safety of all."
2/1/2025	"The safety issues caused by oem led headlights from the factory has caused many accidents for surrounding vehicles. With the increase of manufacturers going led, ignoring the negative attributes of led and only focusing on the positives is no longer acceptable. Government regulation needs to be implemented and upheld to meet certain safety criteria to remedy the unregulated and unsafe actions auto manufacturers have blindly accepted as normal."

2/1/2025	87d2461b22f5.html"
2/1/2025	"I fear for my safety"
2/1/2025	"I get awful migraines from the blinding headlights"
2/1/2025	"I can't see!"
2/1/2025	"I'm very conscious of being blinded on the road whilst driving."
ZI 11 ZUZU	This very conscious of being builded on the road willist driving.

	"those lights are dangerous and make night driving/neet 4nm in the winter here) dangerous
2/20/2025	"these lights are dangerous and make night driving(past 4pm in the winter here) dangerous
2/28/2025	for even people with mild stigmatism" "I started driving in 2022, three years ago. I have no eye issues medically. Since 2023 after
	my first year driving I can no longer drive at night due to not being able to see the road after
	LED light exposure from oncoming vehicles and the vehicles driving behind me. My eyes
0.07.0005	are filled with spots and color dots for about 30 seconds after LED beams hit my eyes. I am
2/27/2025	not old, I'm 21 and cannot see while driving!"
2/27/2025	" https://chng.it/t46S4fBVXG "
	"The combination of increasingly bright headlights, vehicles getting taller, and the adoption
	of a "cold" hue of light is literally lethal, and is directly costing Americans their lives. Laws
	need to be put in place to mandate the brightness, angle, and hue of headlights to prevent
	drivers from being blinded. There have been many occasions where I haven't been able to
	see a pedestrian crossing the street until the last few seconds due to a truck or SUV with
	unnecessarily bright headlights in the oncoming lane, and this story is becoming more
	common as the years go on. It's also been proven that "cold" or "hard" lights (like the ones
	you see in modern cars) are far more blinding than "soft" or "warm" lights (like you see in
	older cars), even at the same level of lumens, which is adding to the problem. The only way
	to solve this problem will be to put a limit on how bright headlights can be, mandate using a
	warmer hue for the color of the light, and ensure that these lights are pointed at the right
	angle. And as much as I'm sure a lot of people don't want to hear this, the only way to
	enforce these laws is with yearly inspections in EVERY state. As a car enthusiast, I typically
	hate having the government tell me what I can and can't do with my car, but the reality is
2/27/2025	that the safety of our fellow humans needs to take precedent."
	"As someone who drives a "normal" car, driving in America SUCKS. What used to be a
	comforting sea of yellowish-white lights is now composed of collapsing suns from
	Tellurides and other unreasonably large vehicles. Since I've got incandescent headlights, I
	just drive with high beams on all the time since no one cares about other folks' retinas
2/27/2025	anymore."
2/27/2025	"LED headlights are blinding and dangerous."
	"On top of the obvious, proven, health and safety concerns that the switch to LED lights by
	car manufacturers has caused, I personally also can't stand the negative psychological
2/26/2025	effects white lights have compared to warmer lights."
	"I'm signing because the politicians will not do anything, the automobile manufactures will
	do nothing, and the police are powerless. This is frustrating to see the road safety
	governance fail us and let this "cash cow" grow. High beam them at the last second, it's the
2/25/2025	only power you have."
	"We as people do like newer and brighter things but it's ridiculous that my safety as a driver
	is at risk because of bright lights I can't drive down my road coming home and someone
2/22/2025	comes by with high beem leds not knowing or seeing what's in front of me because of it"
	"I drive back and forth from the colonial Beach and Fredericksburg area so I can go to work
	and it sucks having to drive that far and I have to pull over and wait for some car to go past
2/22/2025	so I can drive safely"
	"I am an Uber Driver, and I mainly drive at night, quite often from dusk until dawn. I enjoy
	this schedule, and moreover this job, above all other schedules and jobs I've worked in the
	past. However, the only issue I have with driving at night are the blinding headlights that
	greet me maliciously on the roadways- and worse, negligent drivers who have their even
2/22/2025	brighter highbeams on. I have nearly wrecked numerous times, however other drivers may
	,,,

	not be so lucky and fortunate. The soft, yellowish lights from the late 1990s and early
	2000s were perfect- one could see perfectly on the road with them, without needing to flip
	one's own highbeams on, and could see whenever someone else's yellow headlights came
	across them. We need soft light back, and we need it now."
	"Oncoming cars with these lights look like they have their high beams on. When I see one
	coming I try to mark where the road is in front of me so I can continue driving when I am
	finally blinded when these cars get closer. Need regulation on this, it is such a pointless
2/22/2025	hazard."
2/21/2025	"LED headlights are blinding"
	"Many others and myself have feared for our safety when blinded by bright head lights.
	there's not always reflectors to help and only newer cars have night mode for their rear view
	mirror, these were what I was told I should do when I get blinded and obviously they don't
	always work. not only do the head lights blind you while they are driving towards you but
	also after when your vision has to adjust to such an extreme change in brightness, which
2/18/2025	may leave blind spots for minutes."
	"I no longer feel safe driving at night because I'm constantly being blinded by these
2/16/2025	headlights. They make the road way more dangerous for everyone."
	"More than once, I have had to shut my eyes in the presence of those infernal things, an
2/15/2025	event fraught with danger."
	"These bright headlights should be banned because it's EXTREMELY dangerous. I have
	binocular vision dysfunction, bright lights hurt my eyes and make my vision distorted. I
	have to slow down and let them pass me, so that I feel safe enough to drive. It's terrifying
2/13/2025	driving at night on freeways with those lights."
	"I try not to drive at night because of the brightness of the head lights. I have friends who
2/13/2025	will not drive in the dark at all."
	"I have astigmatism and significant photosensitivity. I have had to bring my life to almost a
	complete standstill because of how difficult and dangerous LED headlights have made the
	road. I live in a rural area and get flash banged around every corner and over every hill, day
	and night. I have had people around here maliciously turn their lights on at me both while
	driving and as a pedestrian because they think it's funny (I've seen them laughing as a
	pedestrian). I have a headache after every drive and my visual snow syndrome gets worse
	the more I'm exposed. The cops do nothing and are now ADDING aftermarket ultra bright
2/13/2025	LEDs to their vehicles. I just want to exist safely and comfortably."
